This information or database system must have a mechanism, such a "Web Service"¹, compatible with the World Database on Protected Areas (hereinafter "WDPA") and the IABIN Protected Areas Thematic Network (PATN), which allows interoperability with other databases or information systems (hereinafter the "Project") and thereby to increase the availability of protected areas information through IABIN.
- 1.2. In pursuance of this objective, the Project will employ the PATN and WDPA standards and attributes. These standards can be met by using the web based system, offered by PATN and UNEP-WCMC, available at online, and/or the tool developed by the Ministry of the Environment of Brazil, which includes a Web Service to automatically provide data to IABIN and the WDPA. If the Institution were to use another tool to digitize its data, in addition to the database used, a Web Service compatible with the WDPA and the IABIN Protected Areas Thematic Network (PATN), which allows interoperability with other databases or information systems, must be built by the Institution in close coordination with the PATN Coordinating Institution. The Institution will make freely available the information generated through the Project by means of its informatics facilities as well as through the PATN and WDPA websites and the tools this network creates for that purpose, for a minimum of five (5) years. The institution will install in a server accessible from the internet, a software that will work as a data provider and will make freely available to the public the information generated through the Project by means of the tools this network creates for that purpose, for a minimum of (5) five years. The institution will update manually or automatically (via web service) the PATN and WDPA databases with the country's protected
