# Critical Thinking: A Foundation for STEM

For over five years, ITEN has curated simple resources to teach about the principles of critical thinking.

ITEN has disseminated these resources through an asynchronous but tutored massive open online course (MOOC), *"Pedagogical Strategies for Teaching Critical Thinking Skills"* as well as through self-paced modules, *"Problem Solving Strategies"* and *"Effective Learning Objectives"*.

These combined resources have been consolidated into a single document, available with a Creative Commons license, for anyone to use with teachers.
