

With the support of a Seed Fund of ITEN, the **FORMAR Program of the Ministry of Education of Tucumán** (Argentina), has been executing a training course, "**Contributions to Teaching and Learning in Rural Contexts from the STEAM Approach.**"

The course provides participating teachers with pedagogical and instructional support, taking into consideration the rural context of schools in the province of Tucumán. The goal is to create learning environments that stimulate student creativity, innovation, communication, commitment, and responsibility, and enables them to continue studying and include themselves as agents of change for local and regional development projects in their communities.

- 60 professional development hours with a certificate of participation upon completion

Throughout the course, the participating teachers will be able to reflect and acquire pedagogical tools within the framework of the STEAM approach. It is expected that they will be able to adopt the STEAM approach in their practices and implement it as a backbone in the Institutional Educational Project, evident in their teaching proposals and classroom plans.
