Factors affecting the generation of positive social integration environments and community

Integration understood as the restoration of the customer's engagement in the community so that he/she achieves autonomy.

Transversal axes:

Development and full recognition of human rights using the

network as a working tool where state, society, civil and

community complement to achieve social integration

Acting Levels

    I.   **State Level**

State situational analysis to identify strengths and
weaknesses.

Development of public policy.

Design of management models

Design of evaluation instruments, monitoring and control

Legal adaptation

Lay community bases

II. Individual Level

Biopsychosocial needs identification and diagnosis from a systemic perspective:

Design of the implementation plan: physical and mental health plan design life

Skills development and income generation social skills
Inclusion education

Judicial follow-up and monitoring (previous hearings and meetings, application of incentives and sanctions).

Follow up

III. Community Level

Look for healthy environmental

spaces

Home visits

Integration Activities

Stigmatization
